## What is monkeypox?

September 2022

An infection caused by a virus  
that has recently arrived in Europe.

### What are the signs of monkeypox?

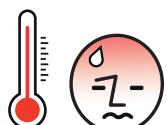

© G. Mansel

Skin lesions often occurring on  
the genitals or anus, but also on  
the rest of the body

Swollen lymph nodes  
in the neck or groin

Fever

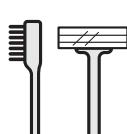

Muscle  
aches

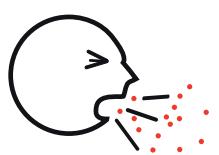

### How do you get monkeypox?

Contact with  
monkeypox skin  
lesions or scabs

Sharing linens,  
personal hygiene  
items, eating  
utensils

Through the saliva or  
respiratory droplets  
(talking, coughing,  
sneezing) of an  
infected person

Traduit en anglais

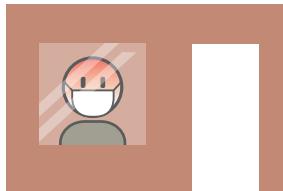

## What if I am not sure?

Consult a doctor or go to a CeGIDD (centre for free information, screening and diagnosis)

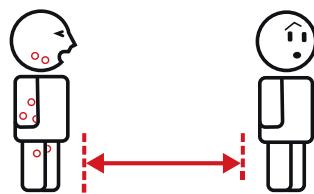

Isolate for  
3 weeks if  
monkeypox is  
confirmed

Protect others  
wear a mask, wash  
your hands and keep  
skin lesions covered

## How can I protect myself?

Avoid physical contact,  
including sex, with an  
infected person

Do not share your  
things with an  
infected person  
(linens, personal  
hygiene items,  
eating utensils)

Wear a mask  
when in close  
proximity to an  
infected person

Smallpox vaccine for those considered  
at high risk of infection
